

Tutorial for the DRYRivers mobile application

Introduction

The **aim of the DRYRivers app** is to enable citizens to collect information about drying events. With this field information, citizens will contribute to the mapping of drying rivers and will help to improve scientific predictions of the future impacts of climate change in these ecosystems.

At each spot, where you would like to record the status of a waterflow, the app will ask you to **provide the following information**:

- Share the **geolocation** of the spot.
- Provide the **hydrological conditions**.
- **Take a photo** showing the hydrological conditions reported.

The app already started mapping drying events in streams and rivers all around the World. You can see the existing records by visiting the project's website (<https://www.dryver.eu/app>). We hope that you will contribute too by providing data from drying streams and rivers!

Downloading and installing the application

The app can be downloaded from Google Play and App Store by searching for the app's name (DRYRivERS).

The links to the Android and iOS versions can also be found on the project website (<https://www.dryver.eu/citizen-science/how-does-it-work>).

Sign up / Login / Registration

If you have an existing account for the app, type in the email address and the password, then click the **LOGIN button**. For creating a new account, click the **SIGN UP button** on the starting screen of the app, then give the requested information on the **Registration page**, then to finish the process, press the **SIGN UP button**. Before you can sign in, you must **confirm your email address** via the automatic email you will receive after completing the registration process.

In case you forgot your password, you can click the **Forgot password? link**, which will redirect you to a page where you can type in your email address that you have used for the registration. You can reset your password via the automatic email that you receive after this.

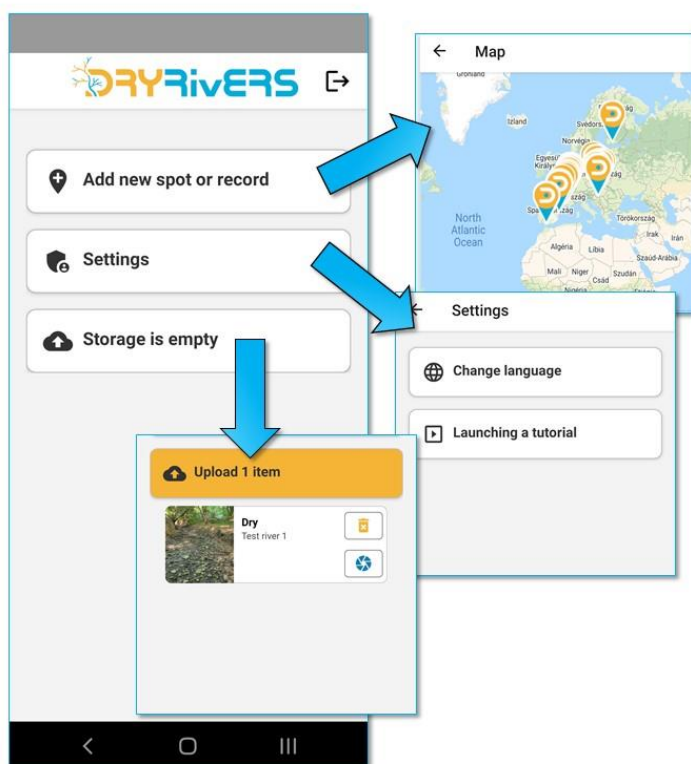

It is also possible to choose your preferred language here by clicking the **Please select preferred language link**. You can also change the app's language in the Settings menu after signing in.

Tutorial video

After signing in the first time, a short tutorial video will be played. This animation will briefly show how to save a new spot or record with the app. You can **replay** this tutorial video any time in the **Settings** menu by clicking the **Launching a tutorial button**.

Starting screen

At the **Starting screen** there are **three options**. You can add a new spot or record by clicking the **Add new spot or record button**, you can adjust some preferences in the **Settings menu**, or you can **upload the recorded spots/records** from your storage.

By default, for the first time when you log in your **Storage is empty**. After you add new spots or records, those will show up in your storage, and you will be able to upload those via the **Upload your items** button.

You can also sign out from the app here by clicking the **Exit icon** next to the DRYRIVERS app logo.

Settings menu

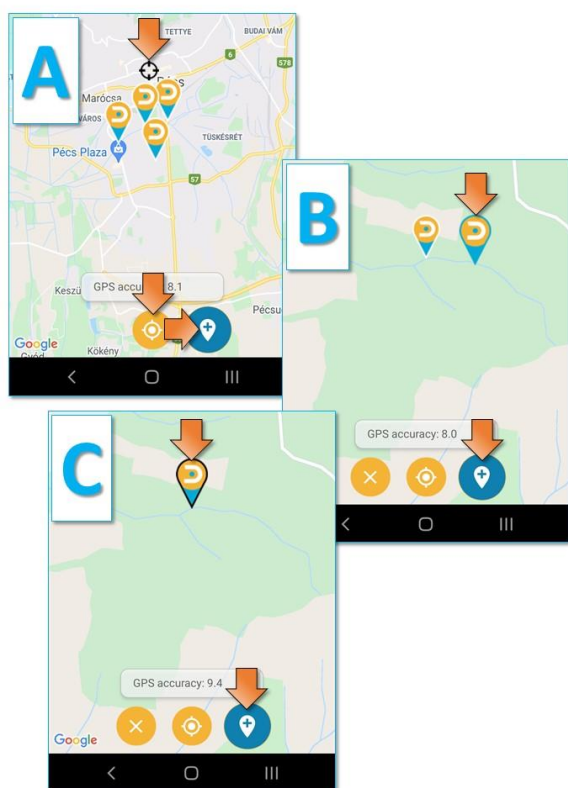

In the Settings menu you can change the application's language (**Change language button**), and you can replay the tutorial animation (**Launching a tutorial button**).

Here, you also find a **link to the DRYvER project's website**, a **link to the Terms and conditions**, and you can see the **current version number** of the app at the bottom of the page.

Adding new spot or record

By clicking the **Add new spot or record button** on the Starting screen, you will be moved to the **Map screen** where you can either find your position by clicking the **GPS icon** or you can manually find the spot you wish to record by scrolling and zooming on the map. Your current location is always displayed by a **black crosshair**.

There are three ways of adding a new spot or record:

- By GPS** – Firstly, **tap the GPS icon** to find your current location. Then **tap the Add new icon**. By doing so, a new spot will be added to your current position.
- By adding new spot elsewhere on the map** – **Find the desired location** of the new spot on the map **by scrolling and zooming**. **Tap on the map** where you want to place a marker. A **new marker** will appear with **blue outline**. Then **tap the Add new icon**.
- By adding a new record to an existing spot** – **Select an existing marker** on the map by tapping it. The marker's **outline will turn to black**. Then **tap the Add new icon**. You will now add a new record to the selected spot.

You can always cancel your selection by clicking the **X icon**.

Please note, that the recommended next step's icon is always highlighted in blue.

Notes and warnings for adding new spots or records

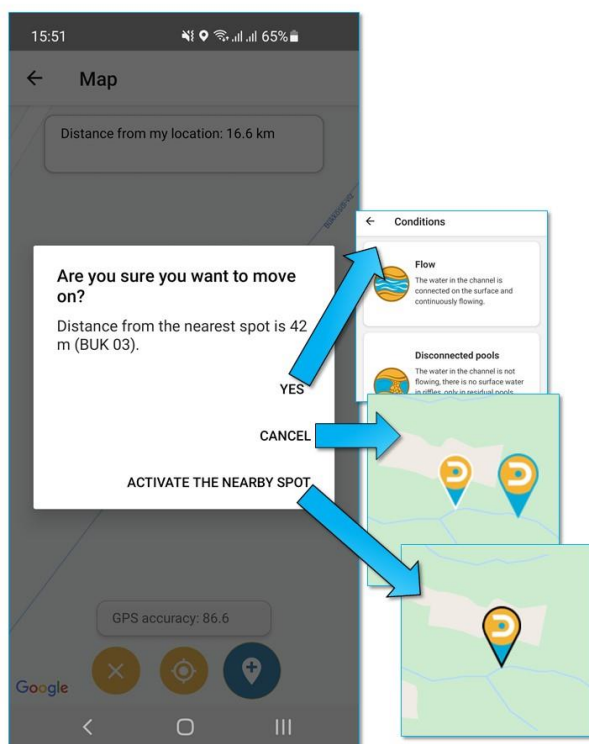

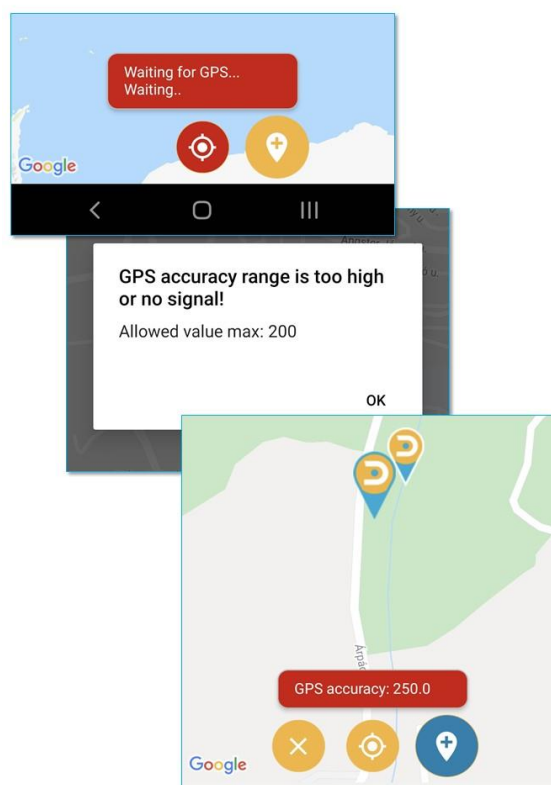

GPS accuracy

GPS accuracy is shown at the bottom of the screen.

If the GPS accuracy is more than 100 m, the indicator will turn red.

If the accuracy is **more than 200 m**, a **new spot cannot be added based on current position** (A method) The GPS icon will turn red, and an error message will appear.

In case the GPS accuracy is too low, **it is still possible to add a new spot** by the adding new spot elsewhere on the map (B method) or by adding a new record to an existing spot (C method).

Close spots

A **warning message** will pop up in case you try to add a new spot either by GPS (A method) or by adding new spot elsewhere on the map (B method) and there is an **already existing closely located (<100 m) spot** on the map.

There are **three options** to choose from.

- You can **continue with your selection (YES)** if you are certain that you want to add a new spot (not recommended),
- or you can **cancel your progress (CANCEL)** and go back to spot selection,
- or you can **activate the nearest existing spot** on the map (**ACTIVATE THE NEARBY SPOT**).

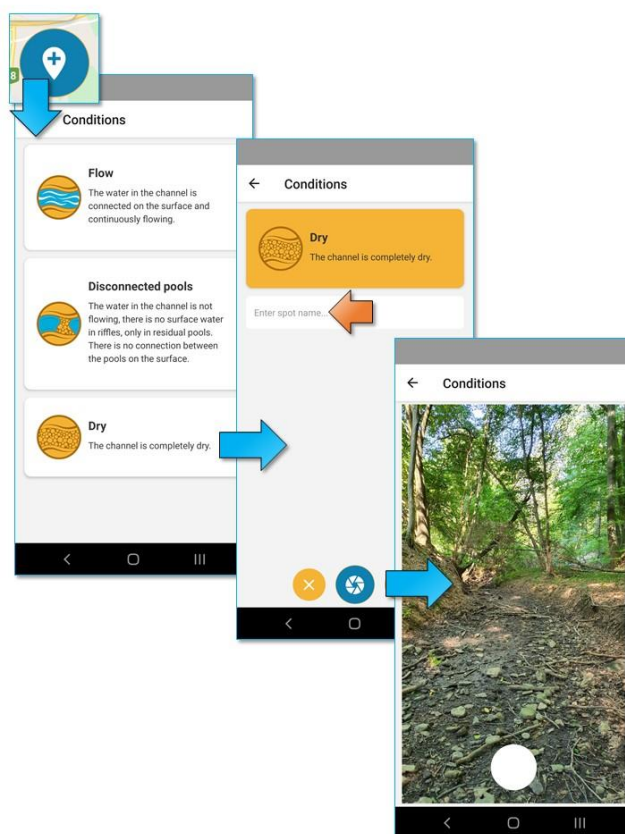

Recording hydrological conditions

After you pressed the **Add new icon** at the Map screen, you will be moved to the **Conditions screen**. Firstly, you will have to select from the three condition options (**Flow / Disconnected pools / Dry**) the one which describes the site's hydrological status the best.

In case you are **adding a new spot**, then you can **enter its name**. If you are **adding a new record** to an existing spot, then the **name is already filled in**.

After that, you can **take a photo** of the current conditions by clicking the **Photo icon** and pressing the **Shutter button**. You can take several photos for a spot/record.

Both **entering the point's name** and **taking a photo** are optional, however **highly recommended steps**. If you try to save a spot/record without a photo, a **warning message** will pop up to ask if you want to proceed with or without a photo.

Just as before at the Map screen, you can always cancel your progress by clicking the X icon.

Saving spot or record

If you are ready with all the processes, you can **save your record** by clicking the **Save icon**.

After that, you will be redirected to the **Starting screen**, where you can choose to add another spot or record or **upload your saved items** by clicking the **Upload items button**. It is possible to add more photos (**shutter icon**) to already saved items before uploading. You can also delete (**trash bin icon**) the saved items in case you do not want to upload them.
